The figure displays a 5x5 heatmap representing the output of a 2D convolution operation. The x and y axes are both labeled from 0 to 5. The background is a uniform red color, indicating high values. A central 3x3 region shows the result of the convolution, with colors ranging from red to dark purple. The color bar on the right indicates values from 0 to 140, with red corresponding to high values (around 140) and dark purple corresponding to low values (around 0). The central 3x3 region shows a pattern of values, with the highest values (red) in the center and decreasing towards the edges.
